Coach Drivers and Get Critical Evidence for Litigation

AI-Powered Driver Camera

Detects and gives alerts for drowsiness, distracted driving, and phone usage before uploading to the cloud, while the road-facing camera analyses and records the front view.

Real-Time Driver Coaching

Unlock the power of real-time alerts to enhance training programs, boost fleet productivity, inform effective coaching, and support safe driving initiatives.

Facial Recognition Software

Automatically identifies drivers and tags them to their routes and vehicles.

Driver Assistance Alerts

The device provides real-time audio alerts to prevent accidents by detecting speeding, stop sign violations, tailgating, and potential forward collisions.

External Events

Road Camera detects and alerts drivers of sudden braking, excessive acceleration, and harsh cornering- with all events recorded and uploaded to the cloud to aid in later coaching & analysis.

User-Friendly Platform

Easily track and review the cloud-based recordings to inform data-driven coaching sessions, exonerate innocent drivers, and create a culture of safety and accountability.
